

Measure	Description
Supplementary ewe premium - decoupled since 2007	The purpose of the measure is to promote those ewe keepers, who kept their animals in less-favoured areas. This support paid directly to the farmers helps to ensure a fair standard of living for employees of ewe.
Suckler cow premium	The purpose of the measure is to support cattle owners who keep female bovine animals weaning and raising calves utilized for beef production. This income support promotes the dynamic development of beef cattle industry, the modernization of production technologies and the efficient farming. It also ameliorates the conditions necessary for successful farming and facilitates the stabilization of the market of beef cattle industry.
Grain, oil, protein, and fiber crops area payment	Not active
Aid for the restructuring and conversion of vineyards	The aim of the measure is to help suite the relations of the demand and supply of the wine and grape production sector, to promote the modernization of vineyards, and the improvement of the competitiveness of the producers. Restructuring and conversion of vineyards can be the changing to different varieties and relocating of plantations. The holder of the support is the natural person or economic operator who/which is the user of the plantation favoured in the restructuring and who/which has individual plan approved by ARDA.
Aid for providing students with milk and dairy products	The aim of the measure is to supply kindergarteners participating in pre-school education, kindergarteners requiring special education, children in primary school participating in basic education-training, children in primary school needed special education and students participating in intermediate education-training in secondary and post-secondary school with a given quantity and category of milk and /or milk product. The support can be requested by those maintainers or suppliers of public educational institutes whose/which participation in the school milk scheme had been previously approved by ARDA and who/which entered into at least one contract - approved by ARDA - with a maintainer of a public educational institute on the transportation of milk and milk products and further more they had delivered the supported product named in the contract in a verifiable and compliant way to the beneficiaries.
Investment support for provisionally recognised producer organisations in the fruit and vegetable sector	The purpose of the measure is to promote the vegetable and fruit producer groups in obtaining the final recognition by partial reimbursement of investment costs included in the recognition plan. The holders of the support are vegetable and fruit producer groups approved by the Minister of Agriculture.
Operational support for provisionally recognised producer organisations in the fruit and vegetable sector	The purpose of the measure is to encourage the establishment of vegetable and fruit producer groups and promote their administrative operation. The holders of the support are vegetable and fruit producer groups approved by the Minister of Agriculture.
Support for operational programmes of producer organisations in the fruit and vegetable sector	The purpose of the measure is to support operational programmes specified in article 33 of the Regulation (EU) No 1308/2013 of the European Parliament and of the Council and regulated in detail in the Commission Implementing Regulation (EU) No 543/2011 to promote planning of production, including production and consumption forecasting and follow-up; improvement of product quality, whether in a fresh or processed form; boosting products' commercial value; promotion of the products, whether in a fresh or processed form; to promote using environmental measures, particularly those relating to water, and methods of production respecting the environment, including organic farming; and to promote using crisis prevention and management actions to avoid sectoral problems. The holders of the support are producer organizations who have approved operational programmes by the Minister of Agriculture.
Cattle extensification premium - decoupled scheme	The aim of the measure is to support those cattle farmers who keep cattle in their farms in an extensive way. This revenue complementary support helps the dynamic improvement of the beef cattle sector and the modernization of producing technologies and effective farming. It improves the conditions for successful farming of beef cattle producers. This directly paid support ensures the proper standard of living of employees working in beef cattle sector and the stabilization of the market of beef (meat).
Agri-environment management	The purpose of the measure is the preservation and improvement of the physical (soil, water, air) and natural environment affected by agriculture, and the conservation of genetic resources. So is the promotion of raising the quality of products, the enhancement of food security and the support of farmers' income security. The support is available for arable crops, grassland management, plantation management and wetland management group scheme.
Afforestation of agricultural land	The purpose of this measure is to promote agricultural restructuring, enhance the country's forest cover, maintain the rural areas of natural and landscape heritage, improve the living conditions of the rural population, and develop the defensive, economic, social and social welfare functions of forests.
Single area payment scheme (SAPS)	SAPS is a decoupled support measure that also can be applied in the new CAP period (2014-2020) - /the basic conditions of the measure do not require growing crops on the area./
National milk support	Entitlement for agricultural producers for the support is determined by ARDA according to the register led by ARDA on the basis of available historical basic rights of the current year. According to the VM Regulation No. 23/2013. (09.IV) the customer is entitled for the support only if: - had been entitled for single area payment (SAPS) - he/she is registered in TIR as a livestock farmer - with the marking of his/her customer-identification registration number in compliance with ACT XVII of 2007 on agricultural, rural development and fisheries supports and questions about actions connecting to other procedures.
Cattle premium - Decoupled since 2007	The aim of the measure is to support those cattle farmers who keep male cattle in their farms for cutting or exporting. This revenue complementary support helps the dynamic improvement of the beef cattle sector and the modernization of producing technologies and effective farming. It improves the conditions for successful farming of fattening bulls. This directly paid support ensures the proper standard of living of employees working in beef cattle sector and the stabilization of the market of beef (meat).
Hungarian National Apiculture Programme	The aim of the measure is to support the production and distribution of honey according to the Hungarian National Apiculture Programme. The holders of the support are those beekeepers who have valid OMMÉ membership verification for the year of submission of application and had been registered in the customer registration system of ARDA before submitting the application or submitted the application concurrently at the latest. - support for medicated protection against varroa mite; - alternative protection against varroa mite - support for the acquisition of hygienic brushwood; - support for the acquisition of new equipment needed for retrieving honey and storing honeycomb - support for the acquisition of new equipment needed in the course of migration - support for the acquisition of radio-frequency identification system (RFID-chip) proper for marking frames; - support for maintaining the number of bee colonies; Only OMMÉ can require support for the following actions: - support for the coordination of national hive training, the collection and dissemination of bee health knowledge - support for the operation of consultant network - support for organizing and taking part in international events, conferences, exhibitions and professional study visits - support for operating beehive-identification system and support for operational activity - support for analyzing the physical-chemical properties of honey ; - support for developing and operating phenological and meteorological hive observer network; - support for monitoring analysis of hive health and environmental impact, support for applied research, in the frame of support for maintaining the number of bee colonies supporting data collection connecting to the usage and analysis of breeding material.
EAFRD Modernization of livestock farms / Animal husbandry	The aim of the support is to modernize livestock farms in order to make them correspond to the regulations connecting to the emplacement of animal manures, to improve the standard of feeding and technical level of livestock farms, the situation of food safety and animal health, the infrastructure and the work condition and the effectiveness of people working in livestock farms. Support can be requested in target areas according to the 3. § article (1) a)-e) 27/2007. Regulation FVM relating to the client's one or more already existing livestock farms.
EAFRD Vocational training	The aim of the support is to widen the professional knowledge of agricultural producers and forest managers on the requirements of cross-compliance, the environmental effect of farming, the implementation of supported actions in accordance with European Agricultural Fund for Rural Development (EAFRD) and the professional operation of the accomplished investment.
EAFRD Modernization of agricultural holdings – purchase of machinery	The purpose of the support is to modernize agricultural holdings and to improve the age structure of agricultural machinery through the purchase of environmentally friendly (energy-saving) machinery and technological equipment.
Separate sugar payment in relation to area related schemes	The holders of the support are those producers who are holders of the SAPS in the current year and had entitlement for beet transport or had contract based on the sugar quota of Slovenia in the reference year (2004 and 2005) or rather had fulfilled their obligation connecting to the right of transportation.
Suckler cow premium - decoupled	Not active

Measure	Description
Agricultural damage mitigation	<p>The aim of the I. pillar of the system assessing the risks caused by weather and other natural risks concerning farming is to mitigate the effects of these risks by assembling a risk community, enhancing the self-care approach of farmers, making national aids more effective and providing proportionate responsibilities for the involved parties.</p> <p>This measure grants the contributors a payment from the contributions of every contributor and from the allocated national budget which should be at least match the sum of the fund financed by the contributors. A partial payment should be applied to contributors in the same year as the contribution was paid and only to areas which are used by the farmer and the damage caused by natural forces regarding these areas caused a more than 30% percent decrease of yield value.</p>
Agricultural damage mitigation - supplement 2007	The aim of the measure was to compensate the agricultural producers suffered frost damage in the year 2007 with the help of surplus support.
Support for organisational activities relating to livestock breeding	The aim of the support is to maintain and improve the genetic quality of livestock breeding, and to promote the performance of breeding management tasks.
EAFRD Less Favoured Areas (LFA)	The aim of the measure is to provide partial compensation – subject to the fulfilment of specific conditions – of economic, social and natural factors having unfavourable impact on the efficiency of production, thereby to sustain production in areas designated as less favoured areas and to stop the increasing migration there from.
Support for phytosanitary inspections	The objective of the support is to ensure the production of quality seeds and propagating materials of high biological value and to better safeguard plant health for the maintenance of plant species.
EAFRD Afforestation of agricultural land	The main aims of the measure are to increase the forest cover of the country, to increase the environmental protection, social, public welfare and economic role of forests and to improve the level of employment in rural areas by developing the forestry sector, to enable the agricultural restructuring, by the help of alternative use of areas. Objectives of forestry also include the establishment of high biodiversity natural forests, through a substantial increase in the ratio of indigenous tree species, particularly in protected areas.
EAFRD Support for plantation of perennial, woody and arable energy crops	The main objectives of the measures are to stabilize the food industry by planting woody energy crops and energy plants on agricultural areas; to provide a choice of alternative culture; to reduce damage from erosion and drainage; to improve unfavourable soil structure; to widely disseminate renewable energy sources and to improve the employment and the standard of living of the rural population.
EAFRD Setting up for young farmers	This measure objectives are to facilitate young farmers' initial establishment and the structural adjustment of their holdings after initial setting up to promote the transformation of the holding structure and the improvement of age structure of the agricultural labour force.
EAFRD - Support for the investment of horticultural machinery	The main aim is to improve the technological level of the horticultural sector through the acquisition of environment-friendly (energy saving) machinery and technological equipments.
Disposal of animal corpses	The objective is to promote a controlled, safe disposal of livestock farms generated animal corpses, thereby improving veterinary health security.
Support of quality carp breeding	The aim of the support is providing non-refundable support in order to increase the effectiveness of quality carp production.
Support for the establishment of organized market relations	The measure aims to promote the spread of contract-based market relations in the agricultural sector of production of animal products.
EAFRD Modernization of horticulture	The main objectives are to provide support for the modernization of buildings needed for horticultural production activity and/or for the storage of produced goods; and also for the use of modern technologies in order to improve the overall performance.
EAFRD Adding value to agricultural products	The objectives of this support are to increase the overall performance and competitiveness of the farm and food business, to improve food safety and hygiene conditions and to reduce environmental impact through the improvement of processing and distributing agricultural products or through the introduction of new products, processes or technologies.
Supplementary Burley tobacco support - decoupled	Burley tobacco - the ARDA determines eligibility for the decoupled support, based on the records kept by the Agency about the available support for the farmer in question in accordance with his historical period entitlements.
Supplementary Virginia tobacco support - decoupled	Virginia tobacco - the ARDA determines eligibility for the decoupled support, based on the records kept by the Agency about the available support for the farmer in question in accordance with his historical period entitlements.
EAFRD Natura 2000 grassland support	The main objective of the measure is to preserve and sustain, by way of up keeping environmentally sound land use methods, the favourable conservation situation of the indicative species and selected habitats listed in the respective EU legislation; ensuring the settings for the natural condition and for a management of creating and sustaining such a condition, protection of the species and of habitats in the indicated areas (with particular regard to grasslands with high levels of biodiversity), as well as the enforcement of compliance with the rules of land use, in line with the provisions.
EAFRD Village renewal and development	<p>Objectives of the measure:</p> <p>The objectives of the measure are to increase living standards by improving the attractive feature of rural settlements in order to reverse outward migration and negative trends of economic and social conditions and depopulation of the countryside. In case of renovation of buildings the measure focuses on inside and outside appearance, taking into consideration, that inside renovation must targets the establishment or development of a former or new community function.</p> <p>Type of actions supported</p> <ul style="list-style-type: none"> <li>- Small-scale infrastructure development projects enhancing the environment and the appearance of the village: parks, rest areas, promenades, and other public areas (except for separate road and sidewalk construction, canalization)</li> <li>- External renovation of non-protected buildings dedicated to community and economic purposes, or playing an important role in the inside and outside appearance of the settlement.</li> <li>- Opening new markets and developing existing ones for improving the sales of local agricultural products, as well as bringing these markets into compliance with applicable regulations.</li> <li>- Establishing children's playground.</li> </ul>
National Support - Reforestation de minimis support	The aim of the measure is to preserve the area (quantity), the environmental balance and health (quality) of forests by supporting the artificial and natural reforestation.
Eradication of animal diseases and zoonoses	<p>The purpose of the measure is to support national programmes aiming the eradication, control and monitoring of animal diseases and zoonoses and the use of the Community financial contribution granted to these purposes.</p> <p>The support is available for the National Food Chain Safety Office carrying out the official veterinary inspections, the Hungarian Association of Sheep and Goat Breeder and county government offices.</p>
Poultry animal welfare support	The aim of the measure is to compensate the covenants of animal welfare in the course of poultry farming beyond regulations.
Swine animal welfare support	The aim of the measure is to compensate the covenants of animal welfare in the course of swine farming beyond regulations.
Support for the distillation of by-product gained during wine making	<p>Within the framework of this support for by-products distillation after the quantity of industrial raw alcohol produced from by-products annihilated during distillation support can be requested, in order to promote quality wine production and the protection of the environment.</p> <p>Eligible for support is the distillery, which declare its interest for the following wine year to ARDA to participate in the measure until 30 June and produces industrial war alcohol from the delivered by-products.</p> <p>The amount of the support for raw alcohol obtained from marc: is 1,1 EUR/%vol/hl, for raw alcohol obtained from wine and lees: 0,5 EUR/%vol/hl.</p>
EAFRD Conservation and upgrading of the rural heritage	<p>The aim of the measure is to maintain, restore, modernize the cultural heritage, to improve the environment and the image of the settlement, to conserve local identity and cultural, natural and built heritage.</p> <p>Target areas to support: structures under local or national protection, the external refurbishment of parts of structures, in case of regular visitation internal refurbishment, modernization, the footpaths lining to the structures, development of parking spots, connecting green surface, development of fence;</p> <ul style="list-style-type: none"> <li>- the improvement and development of the natural and historical landscape and its parts, development of resting areas promoting the introduction of natural and historical attractions, the refurbishment of the already existing ones.</li> <li>- development of educational paths, thematic paths and hiking trails, making of informative issues on local natural and historical values, on protection of the environment.</li> </ul>
EAFRD Encouragement of tourism activities	The purpose of the measure is to support sustainable rural development and agro-tourism investments, development and services in order to create or preserve jobs.

Measure	Description
EAFRD Support for the creation and development of microenterprises	The purpose of the measure is to support the creation of new micro-enterprises in rural areas and the investment and technological development of operating micro-enterprises with a view to promoting entrepreneurship, maintaining and creating jobs and developing the economic fabric. Support is available for the development of micro-enterprises and for undertaken or planned economic activities outside the scope of economic activity. Grant applications can be submitted by natural persons, start-up and operating micro-enterprises.
National Support - Agricultural de minimis for fuel oil used in vineyards and fruit plantations	Non refundable de minimis payment for agricultural producers for fuel oil used for the cultivation of vineyards and orchards.
EAFRD agri-environment measure	The purpose of the measure is the preservation and improvement of the physical (soil, water, air) and natural environment affected by agriculture, and the conservation of genetic resources. So is the promotion of raising the quality of products, the enhancement of food security and the support of farmers' income security. The support is available for arable crops, grassland management, plantation management and wetland management group scheme.
EAFRD Forestry-environment payments	The purpose of the measure is the preservation and extension of the current breeding range of indigenous tree species by removing spontaneous and aggressively expanding, non-indigenous tree and shrub species. This measure consists of the following schemes: Reduction of the aggressively expanding, non-indigenous tree and shrub species scheme Selection forest management scheme Labour-intensive nurturing of forests scheme Reduction of clear felling restoration of indigenous forests scheme Ensure opportunities for provision of special forest habitats and natural forest regeneration scheme Postponement of final use for the purpose of soil and habitat protection scheme Maintenance of forests for public welfare scheme Development and maintenance of forest clearings scheme Use of environmental friendly handling methods scheme
EAFRD Setting up and Operating EAFRD Community Service Center	The purpose of the measure is to support the design and operation of an Community Service Center (CSC) (as a result of the renovation of the former village and community centres community, cultural, public educational, social, health, business, information, communication, administrative and other services become available for the population living in rural areas to promote quality of life). Eligible activities: internal and external renovation of buildings, modernization, expansion and purchase of related equipment. Grant application can be submitted between 1 September 2009 and 15 October 2009 by local governments with CSC title, national governments, local government associations, multi-purpose microregional associations, non-profit organizations and church legal entities.
School fruit programme (EAGF)	To increase the level of national fruit consumption and to improve the dietary habits of the younger generation, vegetables, fruits or vegetable/fruit juices are provided to children learning in state schools.
Agroforestry systems	The agroforestry systems provide possibility to install and exploit wooded pastures, to maintain original, regional farming, to develop the mosaic landscape fabrics. In this measure for the first installation of agroforestry systems on agricultural land parcels a one-time, non-refundable single area payment can be requisited. The amount of the support by agricultural parcels: in case of combined execution of planting grass and trees, hungarian forint corresponding to 1050 Euro/hectar. (it can only be chosen in case of area in arable land sector)
Payment for Breeding Indigenous Agricultural Species	The aim of the support is to support the preserving of protected and endangered indigenous animal species in breeding and to compensate the loss of income.
National Diversification Programme - improving tourism	The purpose of the support is to link the development of rural tourism forms in the settlements affected by the closure of sugar factories.
Development aid for winery machinery and technical equipment purchases	Investment support for new vineyard machinery and technological devices in order to enhance the overall efficiency of the vineyard and the production and packaging quality of winery product.
EAFRD - Setting up and Modernization of Horticultural plantations	The main aim is to improve the technological level of the horticultural sector through the acquisition of environment-friendly (energy saving) machinery and technological equipments.
Vegetable-fruit and tobacco restructuring	The aim of the support is not to deduct the agricultural areas from utilization and to maintain the employment level of those employees who had formerly been employed in fruit, vegetable and tobacco producing. Those producers could have indicated their intention to accession in the restructuring support scheme from the year 2010 and 2012 who had produced vegetable (paprika, asparagus, horse-radish, melon), fruit (apple, pear, cherry, sour-cherry, apricot, peach, plum) or tobacco and had requisited single area payment.
Special Milk Premium	Special milk support for milk producers with direct or supplier quota based on the milk produced and sold in the previous quota year.
EAFRD - Implementation of local development strategies. Quality of life/diversification	The measure aims at the facilitation of the sustainable and innovative use of internal resources, building up cooperation among rural actors to prepare and implement sustainable local development strategies featuring integrated approaches, local innovative solutions and operation of broad partnerships, improving the quality of life in rural regions, preserving and generating working places and enhancing life-long learning, by enforcing all the criteria specified in Article 61 a)–g) of Council Regulation no. 1698/2005/EC. The measure also foresees the promotion of sustainable and competitive novel local procedures for strengthening the potential of agriculture, forest management, food industry, rural economy, the sustainable utilization of cultural and natural values, the development of human services and local communities.
EAFRD Implementation of the local development strategies. Competitiveness	The measure aims at the facilitation of the sustainable and innovative use of internal resources, building up cooperation among rural actors to prepare and implement sustainable local development strategies featuring integrated approaches, local innovative solutions and operation of broad partnerships, improving the quality of life in rural regions, preserving and generating working places and enhancing life-long learning, by enforcing all the criteria specified in Article 61 a)–g) of Council Regulation no. 1698/2005/EC. The measure also foresees the promotion of sustainable and competitive novel local procedures for strengthening the potential of agriculture, forest management, food industry, rural economy, the sustainable utilization of cultural and natural values, the development of human services and local communities.
She-goat de minimis payment	The aim of the scheme is to enhance the profitability of keeping she-goats by providing de minimis payment.
Loan for Frost Damage 2011.	Payment, covering the interest and other fees of farmers who took the loan provided to those who's holdings suffered frost damage in may of 2011.
Prevention of animal diseases (poultry)	The aim of this scheme is to provide supported animal-healthcare solutions to eliminate, and to monitor animal, diseases threatening animal populations and to prevent specific kinds of zoonoses by providing supported animal-healthcare solutions.
Prevention of animal diseases (other)	The aim of this scheme is to provide supported animal-healthcare solutions to eliminate, and to monitor animal diseases threatening animal populations and to prevent specific kinds of zoonoses.
EAFRD - Setting up and Modernization of Fruits and Horticultural Plantations	Non-refundable support can be requisited for the replantation and supplementary installation of already existing plantations in favour of the alteration and modernization of species/types of structures listed in the support regulation. The support can also be requisited for the installation of new plantations and for their cultivation until becoming pistil.
Agri Széchenyi Card (ASzK) overdraft	The purpose of Agricultural Széchenyi Card scheme is to support - those enterprises or natural persons who are involved in agricultural production, fish farming, processing and marketing of agricultural products, forest management or game propagation - the preservation of jobs in rural areas - the creation of jobs in rural areas - the bridging liquidity problems of agricultural enterprises.
EAFRD - E-signing of sheep and goats	According to the Regulation (Ministry of Rural Development) 79/2011. (VIII. 3.) the keeper of an ewe or goat rearing can requisite for support in sourcing electronic unique signing devices and in partial ex-ante refunding of the costs of sourcing.
Village Renewal - paragraph 2. (3) a) general de minimis	The purpose of the measure is to preserve and improve farmsteads and settlements, and to provide access to electricity services for the buildings used for residential purposes of farmsteads without public electricity network connection or off-grid power generation equipment (electricity producing equipments of power output up to 3,5 kW, individual development of the internal consumer network equipments).
Specific support for ruminants re-structuring programme	The aim of the programme is that farmers active in beef cattle and ewe sector shall not be forced out of local economical networks and the level of economical activity shall not decrease. Farmers concerned continue their economical activity similar to previous livestock farming on the basis of free agricultural or rural market decision. The employment rate of these areas shall not decline. The beef cattle and ewe breeding areas shall not be deducted from usage and shall remain in a good ecological state.

Measure	Description
De Minimis Payment for Dried Fodder	To preserve the produce of dried fodder in Hungary. The holder of the support is that plant producing dried fodder which had the approval of the extinct (from the day 31. March 2012.) measure of support for dried fodder in the 2009/2010, 2010/2011 and 2011/2012 base period of economic years. Further condition is that the plant producing dried fodder shall produce dried fodder in either economic year of the base period and shall use at least half the amount of fuel used for producing fodder for producing dried fodder in the current year in the average of base period.
Special Payment for Rice	The source of the special rice support is the financial framework defined by European Commission of European Agricultural Guarantee Fund. Its annual allocation is 1 300 000 Euro. The maximum amount of special rice support cannot exceed the 520 Euro per year per hectare. The support cannot be paid for an area less than 1 hectare.
EAFRD - Diversification into non-agricultural activities	The aim of the support is to stimulate the other revenue-generating, farming and provider activities of people living from agriculture. Support can be requisited for: technological development, sourcing machines, devices, constructions connecting the activity, improving infrastructure in a limited way, introducing environmental administration and quality administration systems, refurbishing village and other accommodation connecting agricultural activity, activities of agro-tourism. Primary agricultural producers and micro-enterprises could have submitted application.
De Minimis Payment for Operating Forest Railways	The aim of the measure is to support the operation of the forest railway according to the act on forest management and the protection of the forest by tendering.
Interest rate subsidy available in Agricultural Current Assets Loan Programme	According to the Regulation 120/2012. (XI.23.) of the Ministry of Rural Development enterprises with existing credit agreement within the Agricultural Current Assets Loan Programme with the MFB Hungarian Development Bank Zrt. (MFB Ltd.) are entitled to interest rate subsidy for the payment of their interests (following the entry into force of the above mentioned regulation). The subsidy can be requested at the financial institution defined in 1. § 8. article of the Regulation on the official form issued by MFB Ltd.
EAFRD Demonstration farm program	The familiarization of innovative technologies by informative presentations of the plant.
EAFRD - Public welfare forest institutions	Non-refundable, 100 % intense support can be claimed for the development of excursion places, resting stops, educational paths and viewpoints in the forest in favour of the implementation of public welfare purposes.
De minimis payment for swine breeders	The aim of measure is to support the purchase of breeding boars, seed and equipment necessary for breeding.
Village Renewal - paragraph 2. (6)	The purpose of the measure is to preserve and improve farmsteads and settlements, and to provide access to electricity services for the buildings used for residential purposes of farmsteads without public electricity network connection or off-grid power generation equipment (electricity producing equipments of power output up to 3,5 kW, individual development of the internal consumer network equipments).
Regulation 94/2013 (X.10.) of the Ministry of Rural Development - SME guarantee de minimis payment -	Those SMEs are entitled to SME guarantee de minimis payment that have joining, cooperation or partnership agreement with Rural Credit Guarantee Foundation (AVHGA) signed after 15th June 2013 according to the Regulation 94/2013 (X.10.) of the Ministry of Rural Development for the surety fee of collateral security or the modification of these transactions.
Regulation 108/2013. (XI.28) of Ministry of Rural Development - ÉLIP de minimis interest subsidy	Based on the state regulation 1806/2013 (XI.12.) on the introduction of the Food Industrial Current Assets Loan Program for loans provided in the frame of the Food Industrial Current Assets Loan Programme operated by the Hungarian Development Bank interest rate subsidy can be claimed which is considered as non-refundable de minimis support based on the regulation 108/2013 (XI. 28.) of Ministry of Rural Development on caliming de minimis support for financing interest rate in connection with the Food Industrial Current Assets Loan Programme.
Promotion measures for agricultural products on the internal market and in third countries	The support aims to promote and acquaint winery products under protection with designation of origin or with geographic signaling or winery products administered with wine grape species signaling in third countries by supporting the implementation of these programs not exceeding a 3-year period.
Regulation 4/2014 (I.27.) of the Ministry of Rural Development - De minimis payment for the operation of vehicles used in apiculture	According to the Regulation (Ministry of Rural Development) 4/2014. (I. 27.) on De minimis payment for the operation of vehicles used in apiculture those apiarist who operate vehicles used in apiculture or mobile bee houses are entitled to a non refundable de minimis payment for the justified costs of the operation and of OBU on-board system purchased in 2014.
Regulation 37/2014 (IV.4.) of the Ministry of Rural Development - De minimis payment for paprika producers	According to the Regulation (Ministry of Rural Development) 37/2014. (IV. 4.) on De minimis payment for paprika producers, producers are entitled to a non refundable de minimis payment for partial compensation of the costs of certified seeds to ensure quality paprika production. The applications must be submitted during the period between May 1 and May 31.
De minimis payment for setting up of hare farms	According to the Regulation (Ministry of Rural Development) 54/2014. (IV. 29.) on De minimis payment for setting up of hare farms the keepers are entitled to the requisition of non-refundable de minimis support.
Village Renewal - paragraph 2. (2) a) agricultural de minimis	The purpose of the measure is to preserve and improve farmsteads and settlements, and to provide access to electricity services for the buildings used for residential purposes of farmsteads without public electricity network connection or off-grid power generation equipment (electricity producing equipments of power output up to 3,5 kW, individual development of the internal consumer network equipments).
De minimis supplementary fee subsidy for hail prevention	The aim of the supplementary fee subsidy is to partially finance the insurance of the hail management service provided by the hail management organization.
De minimis interest subsidy - TÉSZ Current Assets Loan Programme	The producer organization is entitled to claim interest subsidy concerning the loan claimed in the frame of the New Hungary TÉSZ Current Assets Loan Programme.
Animal welfare support - Breeding sow	The aim of the measure is the compensation of animal welfare commitments beyond provisions in case of keeping breeding sow and gilts used/held for breeding.
Temporary national suckler cow premium	The purpose of the measure is to support cattle owners who keep female bovine animals yearning and raising calves utilized for beef production. This income support promotes the dynamic development of beef cattle industry, the modernization of production technologies and the efficient farming. It also ameliorates the conditions necessary for successful farming and facilitates the stabilization of the market of beef cattle industry.
Temporary national ewe premium	The aim of the measure is to support those ewe keepers who keep female ewes for producing ewe meat at their farm. This revenue complementary support helps the dynamic improvement of the ewe sector and the modernization of producing technologies and effective farming. It improves the conditions for successful farming of ewe-keeping producers. This directly paid support ensures the proper standard of living of employees working in ewe sector and the stabilization of the market of ewe meat.
Voluntary coupled scheme for suckler cow support	The purpose of the measure is to support cattle owners who keep female bovine animals yearning and raising calves utilized for beef production. This income support promotes the dynamic development of beef cattle industry, the modernization of production technologies and the efficient farming. It also ameliorates the conditions necessary for successful farming and facilitates the stabilization of the market of beef cattle industry.
Voluntary coupled scheme for ewe support	The amount subtracted in the course of the adjustment applied in connection with the financial discipline and that was not used by the European Union and is approved for the member state, the member state can reimburse the amount until the 15th of October following the claim year for those clients who received financial discipline in the given financial year.
Voluntary coupled scheme for beef support	The purpose of the measure is to support bull owners who fattening stores at their farm. This income support the modernization of production technologies and the efficient farming.
Voluntary coupled scheme for milking cow support	According to the Article 52 of Regulation (EU) No 1307/2014 of the European Parliament and of the Council Production, this is a coupled support, which may be granted to dairy farmers.
Reimbursement of financial discipline	The amount subtracted in the course of the adjustment applied in connection with the financial discipline and that was not used by the European Union and is approved for the member state, the member state can reimburse the amount until the 15th of October following the claim year for those clients who received financial discipline in the given financial year.
Voluntary coupled support for sugar beet	The aim of the measure to prevent the decrease of sugar beet production. General eligibility condition: the claimant producing sugar-beet has to be entitled to SAPS for the area determined under the coupled schemes; sugar-beet producer has made a supply contract directly or through producer organization, or other intermediary (called 'integrator') with a certified sugar manufacturer to produce quota sugar until 2017 (sugar from 2017); the sugar-beet producer having made a contract sells the quota beet (sugar-beet from 2017) produced either directly to the factory or through intermediary, producer group.
Voluntary coupled support for vegetables for processing	In Hungary the area of vegetables for processing to be financially supported showed a declining trend in the period regarding 2009 to 2013. The aim of the measure is to prevent the decrease of production of vegetables for processing. As the profit position of protein fodder is very weak the aim of the measure is to make General eligibility conditions: The claimant is, for the given claim year and for the land marked as land under production of vegetable (open-field) for industrial processing, entitled for SAPS support; the vegetable producer is a natural or legal person who produces such vegetables at least on 1 hectare; use of certified seed with verified origin in a certain quantity; verification, in case of purchase of the seed; the claimant maintains the crop, at normal growing conditions, at least until the beginning of flowering except potato, common sored and spinach.

Measure	Description
Voluntary coupled support for vegetables	The production area of field vegetables designated for support has shown a fluctuation trend between 2009 and 2013. The aim of the measure is to prevent the decrease of production of field vegetables. General eligibility conditions: The claimant is, for the given claim year and for the land marked as land under field vegetable production, entitled for SAPS support; field vegetable producer is a natural or legal person whose land is at least 1 hectare and within the eligible SAPS area the area for production of such vegetables is at least 0,3 hectare; use of certified propagule (seed, plant, bulb, clove) - except horse radish cutting and asparagus cutting - with verified origin in a certain quantity.
Voluntary coupled support for protein crops	Protein fodder crops (lucerne, clover, sainfoin, cereal-legume mixtures and their seeds) accounted for 173 thousand hectares in Hungary during the period 2009-2012, covering 3 per cent of the total utilised agricultural area. The growing area of protein fodders showed substantial changes from year to year. The aim of the measure is to make the sector a bit profitable compare to other sectors and stop the decline. General eligibility conditions: The claimant is, for the given claim year, entitled to SAPS support for an area at least 1 hectare and cultivates certain plants listed in national regulation; use of certified propagule - both for species and varieties for new plantation or oversowing - with verified origin in a certain quantity; as a derogation from the above condition no certified propagule is required for the initial sowing of multiannual crops taken palce before the first year of the application of this scheme; in the case of a mixture (in case of secondary crops as well), protein crops must have a verified rate of over 50 percent; in the case of stands older than one year (with the exception of plants sown in autumn) one reaping is compulsory in the first year and two thereafter; if the stand is older than one year in the claim year, than it has to be reaped twice; in case of multiannual crops minimum 80% plant covering (crop stand uniformity) has to be maintained.
Voluntary coupled support for soybean and protein crops	The total area of soybeans and protein crops (peas, beans and sweet lupine) decreased by 3 per cent to less than 63 thousand hectares between 2010 and 2012. The average per hectare yield of protein grains was 1.6 tonnes per hectare in the period 2009-2012, which was 35 per cent lower than the yield in the main producing Member States of the EU. The per hectare yields of these crops have also been quite volatile due to the generally low level of cultivation knowledge in Hungary. Per hectare yields in the sector, in comparison to the leading producers in the EU, are low, which is disadvantageous with respect to the profitability of the sector. Therefore the aim of the measure to stabilize the yield and maintain the profitability. General eligibility conditions: The claimant is, for the given claim year, entitled to SAPS support for an area at least 1 hectare and cultivates certain plants listed in national regulation; with the exception of field pea use of certified seed with verified origin in a quantity as required in national regulation; minimum yield: 1 ton per hectare; soybean, horse bean, sweet lupine; 2 tons per hectare: peas.
Voluntary coupled support for fruit produced	The aim of the measure to prevent the decrease of fruit production and to maintain the effective production level of fruit processors domestic raw material. General eligibility conditions: The claimant is, for the given claim year and for the land marked as land under fruit production, entitled for SAPS support; The area for production of such fruits (listed in national regulation) is at least 0,3 hectare; The claimant has to declare that he/she meets at least 2 out of the 3 requirements below at the time of the last date for the submission of the single application without sanction: - maximum age of the plantation (national regulation); - fixed irrigation system is available; - 85 percent of the plantation has to capable of bearing fruit.
Payment for young farmers financed by the EAGF	The creation and development of new economic activity in the agricultural sector by young farmers is financially challenging and constitutes an element that should be considered in the allocation and targeting of direct payments. Since it should only cover the initial period of the life of the business and should not become an operating aid, that payment should only be granted during a maximum period of five years. It should be available to young farmers commencing their agricultural activity who are no more than 40 years of age in the year of the first submission of the application under the basic payment scheme or under the single area payment scheme.
Payments for agricultural practices beneficial for the climate and the environment	The aim of the measure is to support actions to adopt and maintain farming practices that help meet environment and climate goals. Greening payments account for 30% of EU countries' direct payment budgets. Farmers receiving an area-based payment have to make use of various straightforward, non-contractual practices that benefit the environment and the climate. They include diversifying crops, maintaining permanent grassland and dedicating 5% of arable land to 'ecological focus areas' (EFA).
small farmer scheme	According to the Regulation (EU) No 1307/2013 of the European Parliament and of the Council, Title V. it is a support for small farmers, which is an alternative form of the direct payments. It replaces other direct payments (SAPS, Greening, Young Farmers, Production-Aid Support). Its purpose is to reduce the administrative burden of small holdings and to simplify the application for support. The farmer may apply for the defined amount in 2015, if it complies with the special conditions of the support in later years.
Voluntary coupled scheme for rice	The aim of the measure to support rice producer in order to maintain the production. Eligibility conditions: the claimant is, for the given claim year, entitled to SAPS support for an area at least 1 hectare; sowing must be finished at latest by 31 May; the producer maintains the crop, at normal growing conditions, at least until the beginning of flowering.
Hungarian Development Bank TĚSZ Current Assets Loan Programme 2020 - de minimis interest rate subsidy	The producer organization is entitled to claim interest subsidy concerning the loan claimed in the frame of the New Hungary TĚSZ Current Assets Loan Programme.
10.1.1 Agri-environment scheme	The purpose of the measure is the preservation and improvement of the physical (soil, water, air) and natural environment affected by agriculture, and the conservation of genetic resources. So is the promotion of raising the quality of products, the enhancement of food security and the support of farmers' income
Regulation 74/2015. (XI.10.) of Ministry of Agriculture - agricultural block exemption guarantee	State aid linked to the guarantee premium for a loan for investments in agricultural production or processing and marketing of agricultural products.
11.1.1 - 11.2.1 Convert to organic farming, maintain organic farming	The purpose of the measure is to maintain and increase biodiversity in order to protect the environment, protect the health of producers and consumers and strengthen natural self-regulation processes. Furthermore to protect and improve the biological state of the soil, to reduce the adverse environmental impacts resulting from the misuse of pesticides and the improper nutrient management and to guarantee of food safety
Hungarian Development Bank Agricultural Current Assets Loan Programme 2020 - unfavorable weather	The beneficiary is entitled to claim interest subsidy concerning the loan claimed in the frame of the Agricultural Current Assets Loan Programme 2020. The aid rate is 100% for beneficiaries in a specific geographical area (affected by unfavorable weather), cultivating of specific cultures.
Interest rate subsidy available in Agricultural Current Assets Loan Programme 2020	In connection with the Agricultural Current Assets Loan Programme interest subsidy may be claimed by the enterprises which have credit contracts.
VP-5-4.1.1.6-15 – Development of the livestock sector – building manure storages	The aim of the measure is to support the construction of covered manure storage complying with environmental protection requirements and reduction of greenhouse gas emissions. Solving the problem of manure settlement can also contribute to the reduction of point-to-point nitrate pollution from agricultural sources, thereby improving the quality of groundwater and coordinating nutrient cycle processes and agrotechnical needs.
Agricultural SzĚchenyi Card Less favourable weather conditions - related costs - agricultural	De minimis aid may be claimed for other costs occurred concerning Agricultural SzĚchenyi Card (in accordance with Commission Regulation (EU) No 1408/2013 of 18 December 2013 on the application of Articles 107 and 108 of the Treaty on the Functioning of the European Union to de minimis aid in the agriculture sector).
RDP-M10.2.1-In situ preservation of native and endangered farm animals' genetic resources	The aim of the support is to support the preserving of protected and endangered indigenous animal species in breeding and to compensate the loss of income.
Village renewal paragraph 2. (3)	The purpose of the measure is to preserve and improve farmsteads and settlements, and to provide access to electricity services for the buildings used for residential purposes of farmsteads without public electricity network connection or off-grid power generation equipment (electricity producing equipments of power output up to 3,5 kW, individual development of the internal consumer network equipments).
Village renewal paragraph 2. (4) agricultural de minimis support	The purpose of the measure is to preserve and improve farmsteads and settlements, and to provide access to electricity services for the buildings used for residential purposes of farmsteads without public electricity network connection or off-grid power generation equipment (electricity producing equipments of power output up to 3,5 kW, individual development of the internal consumer network equipments).
RDP-M04.2.1- Adding value to agricultural products	The purpose of the Call is to provide opportunity for the agricultural producers as well as for non-agricultural-producer micro and small businesses, to make improvements which help them to carry out their activities economically, and to help them to maintain their own and their employees' employment. The further objective of the Call is improving competitiveness of the industry actors by implementing state-of-the-art, innovative technologies. Strange emphasis is placed on the production of higher quality products that meet specific needs as well as on investments in resource efficiency.
RDP-M04.1.3.4- Horticulture modernization – fungi houses and cold stores	The purpose of this call is to improve the competitiveness of the horticultural sector and the production of added value by promoting spreading of new, innovative and environmentally friendly horticultural technologies and cultivation methods. The operation also extends in the horticultural economy to improve the energy efficiency of the sector to reduce environmental effects. The operation for horticultural equipment helps to reduce the energy consumption by renovations of building energy, building engineering and energy supply; Horticultural farms are promoted by the use of renewable energy technologies, as well.
RDP-M04.1.3.1-Horticulture modernization – glass houses	The purpose of this call is to improve the competitiveness of the horticultural sector and the production of added value by promoting spreading of new, innovative and environmentally friendly horticultural technologies and cultivation methods. The operation also extends in the horticultural economy to improve the energy efficiency of the sector to reduce environmental effects. The operation for horticultural equipment helps to reduce the energy consumption by renovations of building energy, building engineering and energy supply; Horticultural farms are promoted by the use of renewable energy technologies, as well.
VP-M04.1.3.2-Horticulture modernization – plantations	The purpose of this call is to improve the competitiveness of the horticultural sector and the production of added value by promoting spreading of new, innovative and environmentally friendly horticultural technologies and cultivation methods. The operation also extends in the horticultural economy to improve the energy efficiency of the sector to reduce environmental effects. The operation for horticultural equipment helps to reduce the energy consumption by renovations of building energy, building engineering and energy supply; Horticultural farms are promoted by the use of renewable energy technologies, as well.

Measure	Description
Conservation of plant genetic resources	The objective of the measure is to prevent gene erosion, to mitigate the negative effects of genetic vulnerability as well as to supply plant breeding, cultivation, ecological farming, agricultural and biological education with genetic resources and to explore and preserve genetic materials for future sustainable use.
VP-6-7.2.1.2-16 Unique wastewater treatment	The general objective of the measure is to provide autonomous nature and individual wastewater treatment solutions for settlements under 2000 resident pars, settlement parts and for settlement groups.
VP-2-6.3.1-16 Development of Small Farms	The support intends to facilitate the implementation of at least the following objectives: stabilisation and development of the market position of the existing product structures, modernisation and diversification of the product structure based on market position of the existing product structures, modernisation and diversification of the product structure based on market requirements, modernisation of the mode of operation, increasing environmental efficiency, production of higher added value products, earning an income and increasing employment.
VP-6-7.2.1-7.4.1.1-16 External reconstruction of buildings defining settlement images, establishment of multifunctional community spaces, modernization of energy	The purpose of the measure is to develop the external reconstruction and energy development of the settlements, the energy modernization of the facilities providing community functions and the creation and development of multifunctional community spaces
Tobacco de minimis support	The aim of the support is to maintain the employment level of those employees who had formerly been employed in tobacco producing. Those producers could have indicated their intention to accession in the restructuring support scheme from the year 2015 that had taken apart in the former tobacco restructuring support system, had requested single area payment and had contract with the tobacco processor and acceptance of the tobacco delivering. Additional support could have indicated producers whose operates artificial or natural drier to decrease their costs.
Support for phytosanitary protection on vineyards	The aim is to support the protection against Grapevine flavescence dorée phytoplasma and it's causative agent (Scaphoideus titanus).
Temporary exceptional support in the milk sector	The item was created to help the position of milk producers in a difficult situation due to the low milk purchase price. The subvention is based on the quantities of milk sold directly or delivered, in the quota year 2014/2015, which could not be more than the amount of the quota of the farmer.
Tobacco de minimis aid	Additional support to the Tobacco de minimis aid in the agricultural sector. General eligibility conditions: The claimant is operates or rents artificial or natural tobacco drier, keeps a log.
Early retirement of farmers and farm workers	The aims are to improve the age structure of farmers - in coordination with the young farmer support scheme; to promote reasonable concentration of the fragmented land structures and to increase the average farm size.
M09 Establishment of producer groups and organizations / Supporting the establishment and administrative operation of producer groups	The support is designed to facilitate the followings: the adaptation of production and performance of members of producer groups to market requirements; the joint distribution of goods - market preparation is included; the centralization of sale and the supply of bulk buyers; and the establishment of common rules for production, harvest and contact information.
M06 Agricultural holdings and business development / Starting aid for young farmers	This measure objectives are to facilitate young farmers' initial establishment and the structural adjustment of their holdings after initial setting up to promote the transformation of the holding structure and the improvement of age structure of the agricultural labour force.
RDP - M08 Forest public welfare premises (NHRDP)	Non-refundable, 100 % intense support can be claimed for the development of excursion places, resting stops, educational paths and viewpoints in the forest in favour of the implementation of public welfare purposes
13.2.1 Compensation payments to areas facing natural constraints	The aim of the measure is to provide partial compensation – subject to the fulfilment of specific conditions – of economic, social and natural factors having unfavourable impact on the efficiency of production, thereby to sustain production in areas designated as less favoured areas and to stop the increasing migration there from.
12.1.1 Compensatory payments for Natura 2000 agricultural areas	The aim of the support is to compensate those farmers who have loss of income because of the implementation of legislation enforcing the Natura 2000 guidelines and costs arising from parts of forests registered in National Forest Database.
12.2.1 Compensatory payments for Natura 2000 forests	Not active. The aim of the support is to compensate those farmers who have loss of income because of the implementation of legislation enforcing the Natura 2000 guidelines and costs arising from parts of forests registered in National Forest Database.
RDP - M04 Support for non-productive investments (NHRDP)	The objective of the measure is to restore and maintain the unique landscape value of the countryside, as well as to improve and together with the agri-environment-climate measure's objective to preserve the diversity of the flora and fauna, also to strengthen the public welfare functions of the Natura2000 sites and High Nature Value areas.
10.2.1.2 Ex situ or in vitro preservation of native and endangered farm animals' genetic resources and advisory activities preventing genetic constriction	The aim of the measure is to support the preserving of protected and endangered indigenous animal species in breeding in ex situ target program, and to compensate the loss of income. Through in vitro target program the goal is to impel the preservation of the genetical stock by supporting the storage of propagation materials. The aim of the information and knowledge-enhancement target program is to support the familiarization of indigenous species in a wider range and to support the popularization of products produced from the species. In the target program named: organisational activities relating to livestock breeding the goal is to ensure the proper professional background (breeding leader, regional breeder) by the breeding organizations.
15.1.1 Forestry-environment payments	The purpose of the measure is the preservation and extension of the current breeding range of indigenous tree species by removing spontaneous and aggressively expanding, non-indigenous tree and shrub species. This measure consists of the following schemes: Reduction of the aggressively expanding, non-indigenous tree and shrub species scheme Selection forest management scheme Labour-intensive nurturing of forests scheme Reduction of clear felling restoration of indigenous forests scheme Ensure opportunities for provision of special forest habitats and natural forest regeneration scheme Postponement of final use for the purpose of soil and habitat protection scheme Maintenance of forests for public welfare scheme Development and maintenance of forest clearings scheme Use of environmental friendly handling methods scheme
RDP - M08 Restructuring of forest (NHRDP)	The aim of the measure is to support the non-productive investments connecting to the improvement of the naturalness, biodiversity, state of health of forests, to support the conversion of run-down structured forest communities or forest communities consisting of exotic tree species to natural forest communities corresponding to given habitat through formation of adequate mixed forests and multi levelled stock structure.
10.2.1.1 In situ preservation of native and endangered farm animals' genetic resources	The aim of the support is to support the preserving of protected and endangered indigenous animal species in breeding and to compensate the loss of income.
10.1.1 Agri-environment scheme	The Title of the Rural Development Programme is: „New Hungary” Rural Development Programme, 2007-2013. The New Hungary Rural Development Program is the National Rural Development Program prepared for the 2007-2013 period pursuant to Art. 15 (1) of Council Regulation (EC) 1698/2005 on support for rural development by the European Agricultural Fund for Rural Development, to be officially submitted by Hungary to the European Commission after its adoption by the Government.
M08 Improving forest areas and the viability of forests / Afforestation of agricultural land	The purpose of this measure is to promote agricultural restructuring, enhance the country's forest cover, maintain the rural areas of natural and landscape heritage, improve the living conditions of the rural population, and develop the defensive, economic, social and social welfare functions of forests.
RDP - M12 Natura 2000 Forest (NHRDP)	The aim of the support is to compensate those farmers who have loss of income because of the implementation of legislation enforcing the Natura 2000 guidelines and costs arising from parts of forests registered in National Forest Database.
RDP - M04 Horticultural machinery (NHRDP)	The main aim is to improve the technological level of the horticultural sector through the acquisition of environment-friendly (energy saving) machinery and technological equipments.
4.2.1 Adding value to agricultural products and promoting resource efficiency in processing	The objectives of this support are to increase the overall performance and competitiveness of the farm and food business, to improve food safety and hygienic conditions and to reduce environmental impact through the improvement of processing and distributing agricultural products or through the introduction of new products, processes or technologies.
VP-5-8.4.1-16 Restoring forest damage in forestry potential	The main purpose is to provide support for restoring forestry potential and to prevent secondary forest damage in areas affected by natural disaster. The nature of the support is normative, non-refundable, and it consist of basic recovery support and additional support.
M07 Basic services and villages renewal in rural areas / Support for the development of basic services for the rural economy and population	The support for rural economy and population for improving basic services can be requisited from 2013 as a complex measure on 25th November 2013, from 8 a.m. until run-down of sources, but at latest on 13th December 2013 until 6 p.m. As a result of this it contributes in improving the quality of life of rural settlements and farm regions by the help of the following 4 target areas: - improving already existing or new carteraker service in villages and farms - improving other social, crime prevention and community services - establishing multifunctional service center (e.g.: improving community center ) - supporting animal shelters operating with official permission. Activities that can be supported are: sourcing new vehicles, internal and external refurbishment, modernization and widening of buildings and sourcing devices connecting to these issues. Support application can be requisited by: local authority, local nationality authority, authority association with own legal personality, nonprofit organization

Measure	Description
RDP - M19 Competitiveness (NHRDP)	The measure aims at the facilitation of the sustainable and innovative use of internal resources, building up cooperation among rural actors to prepare and implement sustainable local development strategies featuring integrated approaches, local innovative solutions and operation of broad partnerships, improving the quality of life in rural regions, preserving and generating working places and enhancing life-long learning, by enforcing all the criteria specified in Article 61 a)–g) of Council Regulation no. 1698/2005/EC. The measure also foresees the promotion of sustainable and competitive novel local procedures for strengthening the potential of agriculture, forest management, food industry, rural economy, the sustainable utilization of cultural and natural values, the development of human services and local communities.
RDP-M08.6.2 Activities serving the mobilisation of the forestry production potential	Increasing the economic value of forests by silvicultural interventions which result in forests having higher economic value. These include interventions the effects of which may not be immediately experienced but in the future during timber utilization. The following are the eligible activities: • care of young forests • cleaning • trunk production intervention
RDP-M04.1.1.1- Modernization of Animal farms	The purpose of the Call is to increase the competitiveness of livestock farms. There is an opportunity for livestock farming and for the handling and storage of the product produced. It is also to create, construct and implement of non-construction projects through the procurement of equipment and machinery for animal husbandry. Improvement of resource efficiency in animal husbandry, among other things, results in a reduction in specific energy consumption, and therefore, in particular, this Call builds on all investment in animal keeping facilities that results energy efficiency. Accordingly, building renovation, modernization of livestock farms' facilities and renewable energy technologies will also be supported. Another important objective is to strengthen and develop the farms of young farmers.
RDP-M04.1.1.2- Modernization of Animal farms – poultry,	The purpose of the Call is to increase the competitiveness of livestock farms. There is an opportunity for livestock farming and for the handling and storage of the product produced. It is also to create, construct and implement of non-construction projects through the procurement of equipment and machinery for animal husbandry. Improvement of resource efficiency in animal husbandry, among other things, results in a reduction in specific energy consumption, and therefore, in particular, this Call builds on all investment in animal keeping facilities that results energy efficiency. Accordingly, building renovation, modernization of livestock farms' facilities and renewable energy technologies will also be supported. Another important objective is to strengthen and develop the farms of young farmers.
RDP-M04.1.1.4- Modernization of Animal farms – sheep & goat	The purpose of the Call is to increase the competitiveness of livestock farms. There is an opportunity for livestock farming and for the handling and storage of the product produced. It is also to create, construct and implement of non-construction projects through the procurement of equipment and machinery for animal husbandry. Improvement of resource efficiency in animal husbandry, among other things, results in a reduction in specific energy consumption, and therefore, in particular, this Call builds on all investment in animal keeping facilities that results energy efficiency. Accordingly, building renovation, modernization of livestock farms' facilities and renewable energy technologies will also be supported. Another important objective is to strengthen and develop the farms of young farmers.
RDP-M04.1.1.5- Modernization of Animal farms – swine	The purpose of the Call is to increase the competitiveness of livestock farms. There is an opportunity for livestock farming and for the handling and storage of the product produced. It is also to create, construct and implement of non-construction projects through the procurement of equipment and machinery for animal husbandry. Improvement of resource efficiency in animal husbandry, among other things, results in a reduction in specific energy consumption, and therefore, in particular, this Call builds on all investment in animal keeping facilities that results energy efficiency. Accordingly, building renovation, modernization of livestock farms' facilities and renewable energy technologies will also be supported. Another important objective is to strengthen and develop the farms of young farmers.
RDP-M04.1.1.3- Modernization of Animal farms – cattle	The purpose of the Call is to increase the competitiveness of livestock farms. There is an opportunity for livestock farming and for the handling and storage of the product produced. It is also to create, construct and implement of non-construction projects through the procurement of equipment and machinery for animal husbandry. Improvement of resource efficiency in animal husbandry, among other things, results in a reduction in specific energy consumption, and therefore, in particular, this Call builds on all investment in animal keeping facilities that results energy efficiency. Accordingly, building renovation, modernization of livestock farms' facilities and renewable energy technologies will also be supported. Another important objective is to strengthen and develop the farms of young farmers.
VP-M08.1.1 Support for afforestation	A) target area: traditional afforestation. Forests created through traditional afforestation will later become properties under forestry utilisation, in whose case, after the first final felling, pursuant to Act XXXVII of 2009 on Forests, Protection of Forests and Forestry, forest holders must renew their forest from their own resources and also continue to manage it in the long term future pursuant to the rules concerning sustainable forest management. B) target area: for the creation of plantations of fast-growing tree species for the purpose of producing industrial raw material. In the case of a plantation for industrial purposes, the created wood community will not be a forest, is not required to be registered as an area under forestry utilisation and, following the first felling of the wood community, it may be used again for agricultural activities. For the establishment of these plantations, the forest authority will make special efforts to ensure that high quality wood raw material is produced only in truly appropriate areas. This means that farmers diversify their activities while at the same time, instead of using the land as cropland, they carry out a less intensive form of land utilisation.
1.1.1 Agricultural and preparatory trainings	The aim of the support is to widen the professional knowledge of agricultural producers and forest managers on the requirements of cross-compliance, the environmental effect of farming, the implementation of supported actions in accordance with European Agricultural Fund for Rural Development (EAFRD) and the professional operation of the accomplished investment.
RDP-M14.1.1- Animal welfare in the milk sector	Animal welfare support for accompanying the restructuring of milk sector. It can be claimed by dairy cow farmers, who complying with the criteria fixed in the referring regulation can receive payment yearly (between 2017-2021).
6.2.1 Starting non-agricultural activities – diversification of agricultural activities, creating micro-sized enterprises	The purpose of the measure is to support the creation of new micro-enterprises in rural areas and the investment and technological development of operating micro-enterprises with a view to promoting entrepreneurship, maintaining and creating jobs and developing the economic fabric. Support is available for the development of micro-enterprises and for undertaken or planned economic activities outside the scope of economic activity. Grant applications can be submitted by natural persons, start-up and operating micro-enterprises.
RDP - M06 Diversification (NHRDP)	The overall objective is for rural people and creating new jobs for rural areas, making rural areas more livable and attractive. The measure is to support farms in homestead settlements and small villages lacking in business or business developments.
VP-3-17.1.1-16 Contribution to insurance premium	The purpose of the measure is to reduce economic losses caused by adverse climatic events, increase the proportion of agricultural land and the range of plants to be insured and the variety of risks to be insured against, furthermore to contribute to a more stabilized farming. The support is granted for loss caused by an adverse climatic event, which destroys more than 30% of the average annual production of the farmer. The financial contribution per farmer is max. 65% of the insurance premium and is paid directly to the farmer. The beneficiaries are those insured farmers/agricultural companies, who submitted a single application and have „A“, „B“ or „C“ type of insurance contract for arable plants, fruits or vegetables that have been declared in their single application for the application year concerned.
Dissemination of innovative technologies by means of demonstration projects on farms and forestry holdings	The general objective of the measure is to increase the professional knowledge of those working in the agricultural sector in order to enhance their competitiveness and the promotion of the sustainability of their farming activities.
Payments to areas facing natural or other specific constraints	The aim of the measure is to provide partial compensation – subject to the fulfilment of specific conditions – of economic, social and natural factors having unfavourable impact on the efficiency of production, thereby to sustain production in areas designated as less favoured areas and to stop the increasing migration there from.
Natura 2000 payments - grassland	The main objective of the measure is to preserve and sustain, by way of up keeping environmentally sound land use methods, the favourable conservation situation of the indicative species and selected habitats listed in the respective EU legislation; ensuring the settings for the natural condition and for a management of creating and sustaining such a condition, protection of the species and of habitats in the indicated areas (with particular regard to grasslands with high levels of biodiversity), as well as the enforcement of compliance with the rules of land use, in line with the provisions.
4.1.1.1 Modernization of animal husbandry farms	The aim of the support is to modernize livestock farms in order to make them correspond to the regulations connecting to the emplacement of animal manures, to improve the standard of feeding and technical level of livestock farms, the situation of food safety and animal health, the infrastructure and the work condition and the effectiveness of people working in livestock farms. Support can be requested in target areas according to the 3. § article (1) a)-e) 27/2007. Regulation FVM relating to the client's one or more already existing livestock farms.
RDP-M04.1.4-Development of water management sector	Support of water retention, sustainable management of our water resources, economical irrigation technologies, climatic-resistant production methods and sustainability land use, adaptation to climate changes. Maintenance or save of surface and groundwater bodies in good condition in quantitative terms for the safety of agricultural production and for the adaptation to climate change
Animal welfare aid for laying hens and breeding stocks of poultry species	The aid scheme compensates for additional costs resulting from animal welfare commitments made on a voluntary basis in the poultry sector which go beyond the relevant mandatory standards established under EU law and any other relevant mandatory requirements established by national legislation.

Measure	Description
RDP-M01.2.2-Information actions	Providing support for farmers, foresters, food processing companies and SMEs in rural areas economic operators, as well as for the participants of Thematic sub-program of the Young Farmer or Thematic sub-program of Short Supply Chains to <ul style="list-style-type: none"> <li>• enhance their competitiveness,</li> <li>• increase their resource efficiency</li> <li>• improve their environmental performance</li> <li>• successful adaptation to the effects of climate change,</li> <li>• to join quality systems and certification systems</li> <li>• improve their cooperation skills</li> </ul> necessary to increase the knowledge base and to increase knowledge transfer, so to sustain the rural economy
RDP-M04.1.2-Crop storage, cleaner, drier,	Improvement of the competitiveness of Hungarian agriculture with ensuring storage and drying capacities and resource efficiency of crops produced on the arable land. Ensuring technical standards for storage and development of long-term storage technologies of stored crops.
RDP-M04.2.2-Winery	providing winemaking machinery, technological equipment, existing technology or machines investment in modernization and construction for farmer and for non-farmer wineries of not bigger than micro, or small-size wineries The purpose of the investment can be specifically to increase the efficiency of energy and of other resource use or usage of renewable energy sources.
Agricultural Széchenyi Card Less favourable weather condition - related costs - general	De minimis aid may be claimed for other costs occurred concerning Agricultural Széchenyi Card (in accordance with Commission Regulation (EU) No 1407/2013 of 18 December 2013 on the application of Articles 107 and 108 of the Treaty on the Functioning of the European Union to de minimis aid Text with EEA relevance).
VP-20.2-16 Technical assistance for structures needed to run the Hungarian National Rural Network	Technical assistance for structures needed to run the Hungarian National Rural Network
20.1 Technical assistance for implementing the Rural Development Program	Technical assistance for implementing the Rural Development Program
Milk production reduction support	In order to help the milk and milk products sector find a new balance under the prevailing severe market situation and given that, on the basis of available market analysis, no significant decrease in production volumes is expected until the end of 2017, it is appropriate that aid is made available to milk producers in the Union who voluntarily engage in milk production reduction.
Széchenyi Agricultural Card - temporary aid	Széchenyi Agricultural Card construction provides subsidy for interest and warrant-fee costs for undertakings entered into a credit-contract.
Voluntary coupled support for vegetables for processing	The aim of the measure is to prevent the decrease of production of industrial vegetables. General eligibility conditions: The claimant is, for the given claim year, entitled to SAPS support for an area at least 1 hectare and cultivates certain plants listed in national regulation; use of certified propagule with verified origin in a certain quantity.
RDP-M04.1.3.5- Horticulture modernization – machinery,	Purchase of new machines and equipment or their quality replacement to meet the increasing demand for high quality horticultural products and to increase the competitiveness of the horticulture sector
RDP-M05.1.1.1-Prevention of weather risks	The aim of the measure is to prevent damages to disasters and adverse climatic events
